

Carmenta Engine Map Configuration

Get started with map configuration

This two-day course is designed to give map designers a thorough understanding of the Carmenta Engine map configuration. By combining important theory with plenty of practical exercises, it ensures that attendees leave the course fully ready to tackle real-world problems.

There are a number of important elements that need to come together to make a great map-enabled application. This is of course particularly true for complex systems like the ones in which Carmenta Engine is typically used.

This course teaches map designers to create attractive and usable maps using the Carmenta Engine toolkit. Our instructors are all experienced configurators who have used Carmenta Engine to build real-world applications, but who are also very familiar with the internal workings of the toolkit itself.

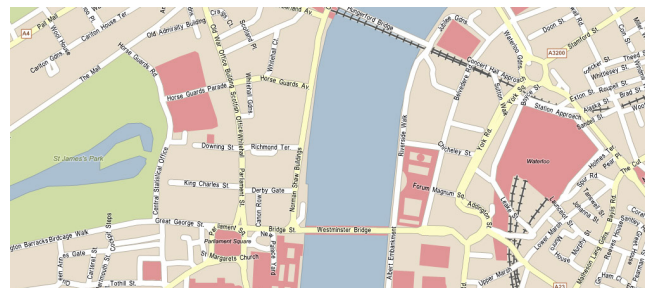

Topics Covered

This is a brief summary of the most important course modules.

- **Carmenta Engine Fundamentals.** Get to know the different parts of the toolkit, including an overview of the Carmenta Engine development tools.
- **Visualizing Geographical Data.** Learn how you can use the power of Carmenta Engine to create good-looking and informative maps.
- **SpaceLab.** A number of exercises will teach you how to get the most of the Carmenta Engine Visual Map Configuration tool.
- **Performance Basics.** This session is packed with best practices that, when applied, will help you avoid common scenarios of poor map performance.
- **Geographical Data Formats.** There are many different ways to store and transmit geographical data. It is important to have a good understanding of the benefits and drawbacks of the various formats.

Who Should Attend

The course is primarily designed for map designers. Participants are not required to know anything about Carmenta Engine. No programming experience is required.

Availability and Registration

The 'Carmenta Engine Map Configuration' course is run several times a year at Carmenta's headquarters in Göteborg, Sweden. Please refer to our website for forthcoming dates.

This course can also be taught on your own premises, offering the additional benefit of being able to customize the course contents to fit the needs of your map designers.
