

PRESS RELEASE

Gothenburg, October 3, 2007

SpatialAce® Web Map Server 3.0 released

Carmenta is pleased to announce the availability of version 3.0 of SpatialAce WMS. SpatialAce WMS makes it easier than ever to build sophisticated mapping applications for web and mobile devices. Combine background maps in any of the over 70 formats supported by SpatialAce with dynamic data such as facility locations, vehicle positions or traffic information.

The flexibility of SpatialAce WMS enables developers to use it for many different purposes:

- Create highly interactive web-based maps and integrate them into existing web sites.
- Build feature-rich web-based geospatial applications such as fleet management systems.
- Provide maps and geospatial calculations in SOA-based systems.
- Provide maps to existing GIS systems via the industry-standard OGC WMS interface.

One of the many new features in version 3.0 is the SpatialAce WMS Rich Web Client. This is an HTML/JavaScript-based component which uses AJAX technology to communicate with a SpatialAce WMS server. It provides a highly interactive map interface which includes a number of predefined GUI components, and can easily be customized to fit the look and feel of an existing site.

"Our new Rich Web Client is a big step forward in web-based mapping interfaces. I am especially proud of the flexible search and filtering functionality" says Tobias Moberg, SpatialAce WMS Product Manager.

A new demo installation which showcases many of the new features is available at wms.spatialace.com.

About SpatialAce:

SpatialAce is an advanced toolkit for building interactive geographic applications. SpatialAce Technology combines state-of-the-art 2D and 3D GIS features with outstanding support for Rapid Application Development.

About Carmenta:

Carmenta's business is to provide high quality geospatial software technology with unparalleled performance to customers building business/mission critical systems on a global market. By offering a high-class GIS technology, we help our clients accelerate their time-to-market and reduce their products' life cycle costs.

We offer a full range of software products and services to system/software integrators and developers in the Location Based Services (LBS), Security and Defense & Aerospace sectors.
