SCA Forest Products chooses Carmenta's map server technology for their new interactive web service

SCA Forest Products is planning on presenting SCA's environmental work and the company's organization on their website, with the help of a user-friendly map function.

The new services set high demands on performance, functionality and accessibility. Which is why Carmenta is the chosen supplier.

The solution, which is based on Carmenta's server technology, will be launched this autumn (2008).

"The interactive map service will make it possible for visitors to our website to easily acquaint themselves with our environmental work and a number of other interesting subjects. We are convinced that Carmenta is the right supplier for this job," says Rolf Edström, Communications Manager of SCA Forest Products.

Carmenta Server is a map engine designed for public web portals with high transaction volumes and high demands on operational safety and accessibility. With Carmenta Server map contents from multiple data sources can be combined with dynamic real-time information for presentation in a single map image. Modern AJAX technology is used to provide a flexible, dynamic and fast user interface.

"We are very pleased that SCA Forest Products has chosen Carmenta as supplier, and look forward to a fruitful cooperation. The fact that more and more companies with a need for web-based business critical map solutions are choosing the Carmenta Server is proof that we made the right choice investing in GIS for the Internet and mobile segment," says Gunnar Storm, CEO of Carmenta.
