

Carmenta Exporter 1.1

An Add-In for ArcMap™ that exports Esri® maps to Carmenta products

Carmenta Engine provides the components and tools that enable software developers to rapidly add dynamic map displays and other advanced map functions to a range of different applications. Carmenta Engine offers excellent map performance and has a proven record of round-the-clock reliability, after several years of continuous service in mission critical defence and security systems.

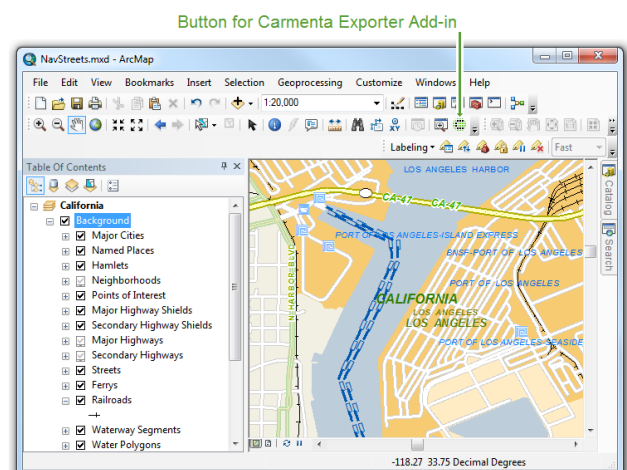

- Easy to use tool that is integrated in ArcMap
- Migrate existing maps from ArcMap to Carmenta
- Preview exported configuration directly in Carmenta Explorer

Carmenta Exporter lets you open a Map Document in ArcMap and then export the visualisation to a Carmenta Configuration. This makes it easy to migrate your existing ArcMap visualisations to Carmenta products, and you can try out your existing visualisations in Carmenta products without having to recreate them from scratch.

In cases that the Add-In cannot export every kind of data source or visualization, even a partial export will save time when you are creating your Carmenta Configuration. You can view the exported configuration directly, even if some data is missing or is displayed in a simplified way, and you can then replace the placeholder dataset and refine the visualisation manually in Carmenta Studio.

Carmenta Exporter is offered without extra cost for all new and existing Carmenta Engine SDK customers.
